Graduation Date: 28.2023

Kitami Institute of Technology (KIT)

Exchange studies

Location: Japan

Graduation Date: 03.2023

- GPA : 4.5, Completed Studies : 264cr

WORK EXPERIENCE

Keyloop

Back-end engineer

Oulu, Finland

02.2022 -08.2022

- Designed, developed and tested new features requested by employer for the local API and Database using C# .Net, Visual Studio and Docker and working with existing company code. The work was organized following Agile practices.
- Managed and organized labor of a group of three other interns, handled the communication with the management, divided tasks, controlled their completion and presentation to the employer.
- As a result I learned a lot about back-end work and C# .Net, as well as gained experience of working in real life working conditions, working in a team and handling position of a team leader.

Cavokapp

Web Developer

Oulu, Finland

05.2021 -08.2021

- Learned and analyzed ins and outs of the existing code written by students before me in order to successfully implement the needed features without interfering with work of the existing ones.
- Designed and developed features as well as fixed some bugs left by previous student in full stack application for Cavokapp, an online logbook for pilots.
- The work was conducted in a team of students under supervision of the product owner and followed Agile Scrum practices. This experience helped me improve my development skills by learning to use new technologies in React, JavaScript, CSS and PHP.

PROGRAMMING PROJECTS

- A number of landing pages, media share apps, chatrooms and utility apps were coded throughout my studies
- Took leadership position during my company-oriented project in Keyloop. I have also frequently took roles as team leader and product presenter during several university projects
- Additionally, I have several records of me performing as representative of the university for promotional and educational videos and presentations in Finland and Japan.
